EPD EN15804 | WUI | Class A ASTM E84

moso® bamboo outdoor

WARRANTY 25 YEARS

MOSO® BAMBOO THERMO®

- Thermo® has a rich chocolate color resulting from thermal modification at 392°F, removing all the sugars & moisture content. Due to this thermal modification process Thermo® is highly dimensionally stable & has high insect & fire resistance.
- Thermo® decking has a reversible profile allowing for design flexibility with a smooth flat side & a reeded side for improved traction or an interesting design element.
- Thermo® requires no annual maintenance. However, annual cleaning it with Messmer's Hardwood Deck Cleaner is recommended. If not, it will weather naturally to a silvery gray (like other exotic hardwoods).

MOSO® BAMBOO N-DURANCE®

- N-durance® has a warm, amber color. To achieve this, bamboo is modified using a steam-pressure treatment at 284°F. This process leaves some natural elements of the bamboo which are susceptible to spotting, similar to other hardwoods.
- N-durance® decking has a "rain-shed" profile with a slightly cambered surface. Shedding water extends periods between maintenance.
- N-durance® is pre-oiled with WOCA Exterior oil (Color: Teak) to enhance the caramel color & provide protection from environmental factors.
- N-durance® does require annual maintenance (cleaning & re-oiling) to maintain the caramel color & 25-year warranty.
